Unharmful support structure, simplified test according to EN12767.

Dear Bengt,

I have today, 2004-08-24, performed a simplified collision test of your plastic side marking post according to chapter 5.6 of EN12767. At 70 km/h a Volvo 740 impacted the post with no notable speed reduction at all. Only minor scratches was seen on the bonnet after the test, and the post rised after being overrun, with only minor scratches in the reflective adhesive tape. In my opinion this product fulfills the requirements for unharmful products in class NE4 (non-energy absorbing) according to EN12767. Pictures are enclosed on the following pages.

With kind regards,

Jan Wenäll
